20.8.2015

Dear Dr.

Mr. Niv Sarig has just gone through a cardiac evaluation and here are the results:

Argometric test from 31.5.2015: Using protocol BRUCE, he reached a pulse of 169 heart bits per minute with no significant cardiac changes in the ECG. The test was concluded as regular. Notice that at the beginning of the stress, several ventricular pulses that disappeared afterwards.

A heart Eco Doppler at rest from 16.8.2015: A very minor left ventricular expansion was presented with no boundaries thickening. Impaired relaxation. Regular valves, lunge pressure regular, no inter ventricular flaw was presented.

Physical check: regular.

ECG from 13.5.15: CRBBB LAHB interval PR=0.2sec with no change from previous diagram. Singular APBS.

Conclusion: Cardiac condition is stable, recommend a regular physical activity.

Best regards.
